

LIGHTING SOLUTIONS

WE
MAKE
THE
LIGHT

SINCE 1980

DTS was founded in 1980 with a vision: to transform the dream of its founder, Dante Latteo, into reality. That dream was to capture the beauty of colors and the magic of light in a tangible object, allowing people to use it as they wished.

From this humble beginning, DTS has grown into a company dedicated to crafting lighting solutions that are not just functional but truly exceptional. Every ray of light we produce is meticulously engineered to deliver consistent color, flawless performance, and a stunning visual impact.

reliability expertise

Our years of experience have allowed us to create products that are indispensable for high-profile events and breathtaking settings.

DTS's long-standing market presence has enabled us to anticipate and adapt to industry changes.

Our ISO 9001:2015 certification and growing recognition among architects, designers, and integrators solidify our position as an industry leader in quality and innovation.

VALUE CHAIN

agility chain
made in italy

From initial concept to final testing, every step is carefully handled in-house. This ensures not only the highest quality standards, but also unmatched flexibility in meeting our customers' unique needs.

Our centralized production facilities, consisting of three factories in close proximity, enable us to streamline our operations. This reduces the time and costs associated with product transfers, minimizes communication errors, and eliminates the need for external quality controls.

A fragmented production chain often leads to longer wait times and higher costs, especially when customs duties are involved. Our streamlined approach overcomes these obstacles, ensuring a more efficient, economical, and reliable process for our customers.

specific
need

opportunity

Our complete control over our internal production processes allows us to offer highly customized solutions that meet your exact requirements.

From minor modifications to standard products to the creation of bespoke solutions for exclusive events, luxurious architectural spaces, or private outdoor areas, our dedicated teams collaborate seamlessly to ensure your every need is met promptly and with the utmost precision.

We offer flexible production capabilities that allow us to deliver even small, customized quantities without the need for expensive prototyping. This approach reduces costs and minimizes waste.

When you choose us, you can be confident in receiving tailored, efficient, and sustainable solutions.

CUSTOMIZATION

bronze marine excellent materials

The quality and durability of our headlights are guaranteed by the use of excellent materials, carefully chosen to withstand the most severe weather and environmental conditions. 316L stainless steel, marine bronze, and the latest generation of LED lights are just some of the elements that ensure a long life to our products.

In particular, marine bronze, used for underwater spotlights, offers a very high resistance to corrosion even in extreme environments, minimizing the need for maintenance.

This results in both economic and operational savings in the long term, with clear benefits for the environment thanks to the reduction of wastefulness and minimization of rubbish.

Investing in our products means a long-term commitment to performance and reliability.

Innovation means continually adapting to market needs while never compromising on sustainability.

Our commitment to sustainability goes beyond reducing waste. We design our headlights to be long-term investments, not disposable products. We don't force customers to replace their projectors annually or to switch to newer models.

By minimizing the total cost of ownership (TCO), we empower our customers to make a more sustainable choice.

For those in the Architainment industry, sustainability means building solid, long-lasting projects that deliver both economic and environmental benefits.

long-lasting
value

SUSTAINABILITY

PASSION

more
than just
a product

Our moving heads are more than just products, they are a testament to our dedication to craftsmanship.

Each stage of production is driven by our passion and dedication. We don't just create products, we craft experiences that evoke emotions and tell stories through light and color.

**Because when you put your soul in...
the result is simple to see!
It's life. It's emotion.**

Breathtaking sky of lights

A vibrant venue sets the stage for a mesmerizing live performance, brought to life with a stunning lighting design that elevates the atmosphere to new heights. KATANA, NICK NRG 1401 and RAPTOR are employed to create a modern, clean, and creative aesthetic, their versatility and striking visual impact bringing the design to life. These units are strategically placed on several trusses, each positioned with precision to ensure the perfect lighting coverage and effect.

The result is a wide range of stunning visual effects, from bold and dynamic light blades that cut through the space with energy and intensity, to soft, pastel hues.

The seamless transition between these varied effects adds depth and movement to the performance, making each moment visually captivating and immersive for the audience.

ARCHITAINMENT - Heritage Architecture

A new era for a historic landmark

Historic structures undergo renovations, often including the addition of new architectural lighting designs for their facades. The goal is to bring liveliness to the buildings, making them more dynamic during the darker hours of the day. The artistic lighting design aims to enrich the structure.

The design and installation process, which includes the careful placement of cables and selection of suitable locations for lighting

fixtures such as DOCTUS.D 12, HI-LINE 30, and BRICK 12, requires special attention and study. The result is a lighting system that supports group or individual management of luminaires, offering color customization for each side of the facade and enabling interactive, color-changing compositions.

This lighting transformation enhances the building's presence, giving it a new dimension that complements its historical significance.
